

Michigan Aerospace Industry Luncheon

The *Aerospace Industry Association of Michigan (AIAM)* invites you to attend an informational luncheon on the growing aerospace industry.

Global commercial aircraft orders are experiencing levels like never before. A recent 20-year forecast estimates the need for more than 42,000 aircraft valued at \$6.3 trillion USD. This upsurge in demand signals considerable growth opportunities for Michigan companies. At the same time, it requires maximum productivity in order to increase output and speed to market with fewer resources.

We welcome you to join us on **Wednesday, March 11** at *Applied Manufacturing Technologies* in Orion Township, Michigan to learn about the latest manufacturing technology and engineering solutions to improve your production processes. Regardless of the level of automation in your operation today, you cannot afford to miss this event. Experts will discuss ways to improve efficiencies, quality and system integration while reducing costs with collaborative robotics. The capital investment is far more reasonable than your previous understanding may have been.
